

Dear Customer,

As you will be aware from our previous communication there is a global shortage issue regarding HDI (Hexamethylene Di-Isocyanate) which is used in UV stable resin systems.

While we had placed orders months in advance to secure supply for all current customers. Sadly, many of our orders for raw material have been cancelled by 'Force Majeure' due to the ongoing supply problems for the next month.

This means no supply over the coming months and possibilities of limited supply for some time after that. We are working closely with factories around the world and will communicate any further news as soon as available

Price have been affected and at this stage the market price is still in flux. As such we will not be able to confirm any changes until closer to the time of material arriving.

We know this situation is difficult for all of us and we are doing everything we can to ensure material availability to complete outstanding work.

We will aim to get back in touch once we know what volume we can achieve and how soon we can service your orders.

Speak to you soon.

The Resin Mill
